

J6530Touch

HTML5-based
Terminal Emulator for
HP NonStop 6530

J6530Touch is an easy-to-use web-browser-based terminal emulator for 6530 and 3270 connections. It is the emulator of choice for users who need a high degree of mobility from anywhere in the Intranet or Internet but do not need a rich additional feature set apart from the 6530 terminal functionality.

■ Functionality

The J6530Touch terminal emulator provides immediate web browser access to HP NonStop 6530 applications and services to users both inside and outside the enterprise. On opening a corresponding URL or hyperlink over a TCP/IP network, the J6530Touch HTML page starts communicating with the corresponding Servlet on the Servlet-enabled web server and is ready to connect to a Telnet server running on any NonStop host. The J6530Touch installation and session profile configuration are carried out centrally. The administrator configures the parameters defining session profiles to access host systems and assigns them to the J6530Touch start page. No installation of J6530 or Java is required on the client side.

■ Features

■ Multi-Session and Multi-Host Access:

Ability to access multiple 6530 applications on any host concurrently, by opening a tab or window for each session within the browser.

■ Platform Independence:

J6530Touch only requires an HTML5-capable web browser on the client side making it truly platform independent.

■ HTTP Tunneling:

J6530Touch tunnels Telnet traffic via HTTP or secure HTTPS protocols for client communication. In doing so, firewall issues are avoided and no additional port has to be used for telnet traffic.

■ Secure Connections:

J6530Touch optionally ensures the confidentiality of transmissions and allows you to protect your sensitive business information on the client side via HTTPS secure connections. In addition, on the servlet side, all connections to the host can be secured via SSL (Secure Sockets Layer) or via the Secure Shell (SSH) encryption protocol.

■ Customized Windows:

J6530Touch allows to customizing its look and feel. The HTML interface can easily be adapted to customer preferences.

Key Features

- HP NonStop 6530, IBM 3270
- Ideal for tablet PC's
- Secure HTTP Session
- Firewall friendly, only HTTP(S) port has to be used
- Platform independence

Requirements

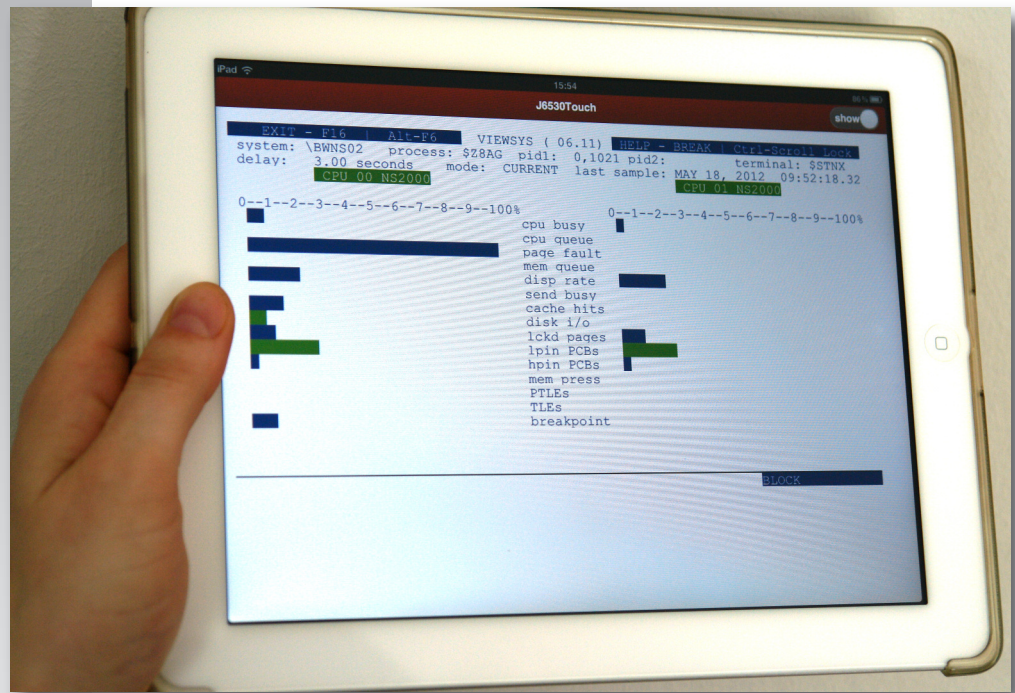

Client

- J6530Touch is optimized for Apple iPad
- J6530Touch runs in any HTML5-capable Internet browser

Server

- Any Servlet-capable web server like
 - HP iTP Webserver with NSJSP container
 - Apache Tomcat, etc.

J6530Touch

■ Benefits

Mobility

J6530Touch provides ultimate mobility by combining the advantages of an HP Nonstop host with those of a tablet PC. As an example, the HP NonStop server can be accessed easily while walking through a warehouse environment.

Simplified Administration

Instead of having to install emulation software on every single workstation, central installation and maintenance including profile management without downloads to the users' work-stations significantly reduces deployment costs, technical support, training costs, and help desk calls.
